

## Kiln Controllers

### *Programmable Controller ( VT-36 )*

The VT36 – Programmable Controllers is one of the best on the market, this kiln controller has been developed specifically in South Africa for kiln management and easy operation for our clients.

These Controllers are "Fully Fledged" **programmable electronic processors**, they can store **36 individual programmes** each with **16 steps per programme**. The controller has a progress chart to track your programme stage during firing. The controller also has useful functions like **multiple Ramp Ups, Ramp Rates (up and down), Soak Times and Ramp Downs**. This allows for complexed **firing programmes for several applications**. In **addition, other functions** like **delayed starts, fault finding with warning and error alarm**, control of auxiliary equipment, **automatic re-start** after power failures are other useful functions.

The Standard price of a VT-36 Micro Processor Controller as a kit is R 2 850-00 (Excl. Vat).

*A number of Imported controllers are also available, prices on request.*
